AG Mednet Launches Imaging Exchange Network

[Normal Version](#)

To address the critical challenges regarding the delivery of medical images, AG Mednet has entered the market and introduced a diagnostic imaging exchange network.

AG Mednet's network enables hospitals and diagnostic imaging centers of all sizes to provide the highest standard of scan interpretation to referring physicians, improving patient care and service.

AG Mednet enables hospitals and diagnostic imaging centers to have reliable, anytime/anywhere access to image interpretation from an extensive community of radiologists via the secure, rapid, and lossless transmission of studies to subscribers, without requiring adding in-house radiology staff or partnering with just one off-site practice.

Radiologists who want to expand their business can gain access to urban and rural hospitals, diagnostic imaging centers, physicians, and clinical trials that need image interpretation.

Executives from the health care and telecommunications industries founded [AG Mednet](#) and have applied proven telecom principles along with patent-pending technologies to deliver a multi-fold increase in imaging delivery performance and ease of use.
